SUMMARY

Software engineering undergraduate (CS + Data Science, SRMIST) with production internship experience delivering enterprise systems using React, TypeScript, Python, and REST APIs. Practiced in object-oriented programming, data structures and algorithms, batch processing, and backend performance optimization.

EXPERIENCE

Software Development Engineer Intern (SDE) Jun 2026 – Present
Routa Digital India

- Accelerated delivery of **6+ enterprise security modules** by architecting reusable React and TypeScript components integrated with REST APIs, reducing per-feature build time by **~30%**.
- Reduced server load by **~40%** on high-frequency reporting endpoints by introducing **batch processing** for bulk user data operations, replacing per-record API calls with paginated, chunked request pipelines.
- Cut average page load time by **~35%** across 3 data-heavy dashboard modules by identifying N+1 query patterns and collaborating with backend engineers to consolidate REST requests.
- Implemented **enterprise-grade RBAC** across **6+ security modules** by building permission-scoped UI components, dynamic group management, and role-conditional workflows for multi-level user hierarchies — ensuring zero cross-role data exposure in a live cyber-risk platform.

PROJECTS

Banking Market Intelligence Automation Dec 2025 – Jan 2026
Python, Pandas, Financial APIs

- Reduced manual data collection time by **~80%** by building an automated pipeline that fetches, normalizes, and analyzes live stock data for **10+ banking stocks**, generating zero-touch Excel reports.

FI Calculations Sep 2025 – Nov 2025
JavaScript, HTML, CSS

- Deployed a **live financial calculator** on Netlify supporting **5+ investment metrics** (SIP, compounding, returns, amortization) — engineered with OOP calculation modules, floating-point safe arithmetic, and CSV-driven data pipelines for reliable, real-time output.

Student Access Portal Feb 2025 – Apr 2025
JavaScript, Node.js, RBAC

- Built a **3-role campus portal** (students, mentors, admins) with JWT-based session handling and route-level access guards, centralizing scheduling and resource management and reducing cross-role data exposure to **zero**.

Self-Hosted Home Server May 2026 – Present
Ubuntu Server, CasaOS, Tailscale, Linux

- Maintained **99%+ uptime** on a self-hosted personal cloud by configuring Ubuntu Server with CasaOS and Tailscale VPN, enabling secure zero-trust remote access and hands-on Linux infrastructure management.

EDUCATION

2023 – 2027 **B.Tech, Computer Science (Data Science Specialization)** CGPA: 8.19 / 10
SRM Institute of Science and Technology (SRMIST)

2023 / 2021 Class 12th CBSE: 64.6% · Class 10th CBSE: 71.8%

SKILLS

Languages	C, C++, Python, JavaScript, Kotlin, Java
CS Fundamentals	Data Structures and Algorithms, Object-Oriented Programming (OOP), REST API Design
Frontend	React.js, TypeScript, HTML, CSS, Tailwind CSS
Backend & Data	Node.js, Batch Processing, Pandas, Financial Time-Series Analysis
Tools & Systems	Git, GitHub, VS Code, Ubuntu Server, Linux Administration, Tailscale VPN
DSA Practice	Arrays, Linked Lists, Trees, Sorting, Searching — Continuously solving on LeetCode
